

# Programme: Horizon Europe

Project Start Date: 01/03/2024

Project Duration: 36 months

**Project ID:** 101159018

**Call for proposals:** HORIZON WIDERA 2023-ACCESS-04

**Coordinator:** Genos d.o.o.

**Project participants:** 7

**Project website:** <https://synhealth-project.eu/>

**Project value:** 1,217,125.00€

**Genos contribution:** 488,875.00€

**SYNHEALTH**  
Synergy for Healthy Longevity

Co-funded by  
the European Union

## SynHealth

### Synergy for Healthy Longevity

Traditional healthcare systems focus on treating illness reactively. This puts a strain on resources and budgets. With rising costs and global funding crises, sustainability is at risk. The EU-funded SynHealth project will address these challenges. Specifically, it will leverage glycan biomarkers to revolutionise healthcare. Genos researchers spearheaded glycomics advancements, identifying potential biomarkers. SynHealth aims to harness these discoveries for real-world application in Croatia and Slovenia. Partnerships in the target regions will facilitate innovation and technology transfer. By integrating glycan biomarkers into preventive healthcare, SynHealth paves the way for personalised medicine and efficient resource allocation. Overall, the project aims to translate past breakthroughs into clinical diagnostic tools, heralding a transformative era in healthcare
