CardioMetabolic

Increasing the Development of New Products and Services Arising from Research and Development Activities – Phase II

The Development of a Personalized Diagnostic Tool for the Prevention and Treatment of Cardiometabolic Diseases (CardioMetabolic) project is being implemented by Genos in collaboration with partners, including three businesses and three research and knowledge dissemination organizations, with the support of EU and Croatian government grants.

The project aims to develop a set of innovative products that will contribute to reducing the incidence of diabetes and cardiovascular diseases in the global population. This will be achieved through tools for:

- Timely risk prediction of disease development
- Enhancing therapy effectiveness for individuals already diagnosed with one or more cardiometabolic diseases
- Developing mechanisms for predicting complications in patients with diagnosed cardiometabolic diseases
