## Development of Personalized Tests for Determining Biological Age of the Brain and Early Detection of Dementia

### Targeted Scientific Research

This project focuses on developing personalized tests to assess the biological age of the brain and enable early detection of dementia. It aims to create innovative diagnostic tools that can help identify early biomarkers of dementia, improving patient outcomes through early intervention. The project involves a partnership between various institutions, with Genos as one of the key project partners, contributing to the research and development of personalized health solutions.
